DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

- Claims 118-134 are rejected under 35 U.S.C. 101 because, they are directed to Non-Statutory Subject Matter. These claims are neither Functional Descriptive Material, nor Non-functional Descriptive Material, they disclose an arithmetic method and apparatus for coding input image data in a predetermined signal format by dividing said image data into block units and by carrying out orthogonal transform in said block units or for subjecting coded data to inverse orthogonal transform and signal format conversion to obtain image data for decoding, this kind of claim language constitutes the intended use, furthermore, wherein, output

value Y_0 , i.e., $X_0 + X_1$, and output value Y_1 , i.e., $X_0 - X_1$, are generated from two input values X_0 and X_1 by an orthogonal transform or an inverse orthogonal transform, these algorithms merely Manipulate Data without appropriate subject matter and thus cannot constitute a statutory process, they do not represent any physical objects or activities to achieve a practical application, they solve a purely mathematical problem, by utilizing an addition step for adding said X_0 to said X_1 to generate new X_1 , a twice value generating step for generating a new X_0 being twice the value of said X_0 and a subtraction step for subtracting said new X_1 from said new X_0 to generate newer X_0 , without any limitation to a practical application. The dependent claims, basically perform addition, multiplication and shifting.
